RESEARCH REPORTING SERIES

Research reports of the Office of Research and Monitoring, Environmental Protection Agency, have been grouped into five series. These five broad categories were established to facilitate further development and application of environmental technology. Elimination of traditional grouping was consciously planned to foster technology transfer and a maximum interface in related fields. The five series are:

1. Environmental Health Effects Research
2. Environmental Protection Technology
3. Ecological Research
4. Environmental Monitoring
5. Socioeconomic Environmental Studies

This report has been assigned to the SOCIOECONOMIC ENVIRONMENTAL STUDIES series. This series describes research on the socioeconomic impact of environmental problems. This covers recycling and other recovery operations with emphasis on monetary incentives. The non-scientific realms of legal systems, cultural values, and business systems are also involved. Because of their interdisciplinary scope, system evaluations and environmental management reports are included in this series.

EPA REVIEW NOTICE

This report has been reviewed by the Office of Research and Development, EPA, and approved for publication. Approval does not signify that the contents necessarily reflect the views and policies of the Environmental Protection Agency, nor does mention of trade names or commercial products constitute endorsement or recommendation for use.

ABSTRACT

This comprehensive, unannotated bibliography contains nearly 5,000 items covering literature in and related to the fields of anthropology, communications, economics, education, design, geography, history, human ecology, landscape architecture, management, planning, politics and government, population, psychology, public administration, recreation, social psychology and sociology. The emphasis is on literature that is substantively, methodologically or theoretically relevant to man and his activities in relationship to natural environments. The bibliography is listed alphabetically by author, with an extensive, crosslisted subject-by-title index under 42 categories.

This bibliography was submitted in fulfillment of Environmental Protection Agency Grant Number R-801234 by Denton E. Morrison (Project Director) and Kenneth E. Hornback, Department of Sociology, Michigan State University, East Lansing, Michigan and W. Keith Warner, Department of Sociology, Brigham Young University, Provo, Utah. Work was completed in October, 1973.

ACKNOWLEDGEMENTS

We wish to thank the many environmental social scientists and others whose splendid cooperation provided valuable substantive, procedural and organizational suggestions for the bibliography. In many cases their lists were substantially incorporated into the present one. In particular we are grateful to Anita Cochrane and Robert Durrenberger for permission, even encouragement, to include large portions of their excellent bibliographies (numbers 964 and 1371 below). We also wish to thank the many commercial and academic publishers who responded generously to our request by sending information and copies. Dr. Dennis Tihansky and Dr. Fred Abel of the Economic Analysis Branch are acknowledged for their support, patience and encouragement throughout the project. Much of the initial version of the bibliography was compiled in 1971 while the senior compiler was on leave at and supported by the Wisconsin Agricultural Experiment Station through the Rural Sociology Department, University of Wisconsin, Madison; this support is gratefully acknowledged as is the continuing support of the Michigan Agricultural Experiment Station.

FOREWORD

In order to achieve the goal of improved environmental quality, as fostered by the passage of the National Environmental Policy Act of 1969, the Federal Water Pollution Control Act Amendments of 1972, and related acts, decision-makers are required to consider numerous socio-economic factors and impacts. Unfortunately the compilation or development of information necessary for decision-making often has been a problem. The extremely rapid increase in the social science literature which relates to environmental quality has made the researcher's job difficult. Compounding this difficulty has been the lack of a comprehensive bibliography devoted entirely to the social science literature on environmental matters. Provision of such a definitive bibliography will be of value to researchers and decision-makers.

The Environmental Protection Agency, Office of Research and Development, as a part of its Implementation Research Division Program, conducts research whose primary objectives include the dissemination of research findings in the socio-economic field. This bibliography is published as an aid to researchers in retrieving information on social science research relative to environmental matters.

The bibliography was compiled by Denton E. Morrison and his associates of Michigan State University and Brigham Young University, under contract to the Economic Analysis Branch, Implementation Research Division.

INTRODUCTION

Environmental problems cannot adequately be solved without the fullest research participation of all the social sciences, including research into the existing body of social science knowledge on environment. But both social scientists with long-term involvement in environmental research as well as the many who are more recently involved are frustrated by a lack of comprehensive bibliographic resources. Many existing bibliographies incorporate social science references, of course, and some subject-specialized social science bibliographies are available, but a comprehensive bibliography does not exist. Thus, mountains may be climbed because they are there, but bibliographies are made because they are not there and are needed if research is to benefit from and improve upon existing work. It is hoped that the present effort will help satisfy this need.

Both the notions of "social science" and "environment" have very broad parameters; narrowing these to the point where a compilation becomes possible is a most difficult task. Some arbitrary judgements are bound to be involved. The most general, over-riding criterion for exclusion-inclusion has been that our interest is in literature that deals directly or indirectly with broadly conceived social science aspects of man and his activities in relationship to the natural environment. However, we include literature dealing with man in relationship to other environments (social, cultural, political, technological, built) with substantive, methodological or theoretical content specifically relevant to the man-natural environment relationship. Beyond this, we have consistently tried to err on the liberal rather than conservative side in deciding whether an item should be included. Partly this criterion is dictated by the fact that it makes the decisions easier, but partly this criterion grew out of an important feature of the procedure that produced the bibliography.

In late 1972 we circulated a preliminary draft of the bibliography containing about 1,500 entries to around 200 social scientists with known environmental interests. We solicited their cooperation in suggesting additional items, the organization of the bibliography and the names and addresses of other social scientists that might like the same opportunity. From this we received literally thousands of suggestions of items for inclusion, plus many useful suggestions for further library searching procedures, organization, indexing, criteria for delineating the subject matter, and so on. This response was at once humiliating, frustrating, edifying, challenging and encouraging. We were humiliated at finding out how much we had missed in earlier searches, frustrated at the prospect of making sense of so much new material, edified by the content as well as the broader concept of the subject matter implicit in the new material and, finally, challenged to incorporate both this broader concept and the new materials into the final version, particularly because the response was overwhelmingly supportive of the utility of our endeavor. Naturally we did not take all the suggestions of items for inclusion, but because we aimed at inclusiveness rather than exclusiveness we more often than not gave the benefit of doubt to the nominator. In a sense, then, the bibliography reflects an operational and, we hope, somewhat creative first attempt at helping an emerging field conceptualize and define itself by tapping and lightly filtering the views of those who see themselves as its practicioners. Not everyone can be expected to agree with the broad conceptualization that has resulted, but without such preliminary reconnaisance no definitive future mapping is possible. We are aware, of course, that our own biases are rather apparent, for instance in the inclusion of a fairly large number of items (and index categories) reflecting research on the voluntary organizations in the environmental movement and on the environmental aspects of quality of life.

We are confident that if this procedure were done again with a new and more comprehensive list of social scientists it would probably produce a bibliography again as large as the present one. We are also confident that many of the present entries contain erroneous information in addition to the fact that they vary in completeness of information. This is inherent in the fact that it became impossible to check every item. Indeed, much of the literature is of a somewhat "fugitive" character that defies location in any library collection; but this does not mean that it will not pay some researchers to know about it and track it down.

We hope that those who encounter difficulties in using the bibliography because of its length, its probable inaccuracies, and its lack of definitive indications for laying hands on certain items will be as generous in their attitude toward us as their colleagues were in supplying the relevant and tempting, but often sketchy, information. There may also be some consolation in knowing we are contemplating seeking support for funds to update and correct the bibliography. Additionally, we are attempting to secure support to publish an address and telephone directory of its authors -- and those authors who should have been included -- in order to facilitate the direct exchanges of literature and information that are crucial to ongoing research. We consequently solicit the relevant information from all parties.

A SUGGESTED PROCEDURE FOR USE OF THE BIBLIOGRAPHY

The index to this bibliography contains the nonpunctuated (and sometimes slightly abbreviated) titles of the items crosslisted under 42 subject categories. Particularly those users who have access to clerical services will doubtless find it useful to (1) mark the titles of interest under one or more subject categories, (2) have an assistant mark these items in the alphabetized list, (3) peruse these marked items with an aim toward further filtering and marking according to author, place and time of publication, and, finally, (4) have the items of special interest resolved to a typed list. In sum, the most efficient way to work with this bibliography will be to approach it systematically with the idea of investing time and effort to resolve it to your own list or lists. The prospect of this may not be a happy one to some, but so far as we know no other resource makes available the opportunity of reducing this task from several months to several hours.
